

fcLearnerPlan

Great for student performance and individual education program plan (IEP/IPP) management, fcLearnerPlan provides administrators and teachers the ability to access and manage facilitated learning plans accurately and efficiently, anytime...anywhere! fcLearnerPlan can also be configured for student and parent access, to assist in maximizing student support and potential.

- **fcLearnerPlan maximizes the technology investment in Open Text's FirstClass**
- **fcLearnerPlan leverages the powerful, online, collaborative environment of FirstClass software, securely from work or home**
- **fcLearnerPlan can be used district-wide and allows administrators, teachers, students and parents to take part in the learning plan process**

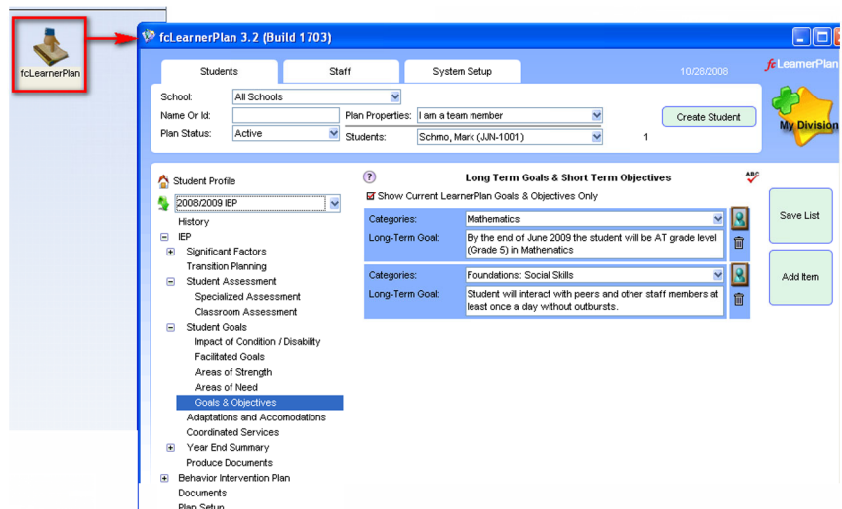

As a FirstClass® school management “add-on” application, fcLearnerPlan™ is the solution to managing and tracking facilitated learning plans, such as Individualized Education Plans (IEPs) or Individualized Program Plans (IPPs), online and within a FirstClass system. fcLearnerPlan allows access of administrators and staff members to all learning plans at all stages of development that are within their area of responsibility. The format of fcLearnerPlan is straightforward to navigate, and provides secure access from home and school.

ENHANCE YOUR ONLINE LEARNING COMMUNITY

FirstClass is a strong, collaborative system that can be used by students and parents to facilitate communication between school and home. fcLearnerPlan provides a platform to help strengthen the learning community.

BENEFITS OF A FACILITATED LEARNING PLAN

Because of the efficiencies of fcLearnerPlan, administrators and staff are able to afford more time to focus on education rather than facilitating manual or less efficient learning plan systems, therefore positively impacting student learning. Staff productivity increases in quality. Time-saving measures become second nature, in part, because of the consolidation of information into fcLearnerPlan.

By consolidating your users' collaboration and data management to a single platform, it becomes easier for the end user to adopt, access, and succeed at managing the needs of your organization.

Traditional Learning Plan Issues Solved

Traditional facilitated learning plan preparation processes involve the manual reporting of required information via paper-based methods or from a software-based template that is distributed between staff members. Members then need updates whenever changes are made. This makes it difficult to establish standards under an environment of changing requirements. Plans can be lost or accidentally destroyed, posing a security risk. Staff members retain specific notes and files that must be merged together to create a comprehensive learning plan for each student.

Learning plans then still need to be shared, often only at defined intervals, with parents who do not have the opportunity to play an ongoing role in plan development. Traditionally, it can be difficult for administrators to report on information specific to learning plan management.

fcLearnerPlan features enhance, modernize and streamline learning plan development while ensuring that the unique needs of the district are met and that each learning plan is uniquely configured for each student. With the Facilitated Plan section, teachers can manage plans for IEP or IPP purposes, following the precise formatting and specifications provided by the jurisdiction of instruction.

Students can use their Personal Plan section to view documentation and to work towards their goals and objectives, which aids in their achievement of greater success in education. The Document section allows for attachment of external files by staff members and there is a General Comments section for providing extra notes.

fcLearnerPlan allows the district to generate custom reports and forms, such as the IEP or IPP document. Specific layouts can be managed at both the district and school level, ensuring maximum reporting flexibility.

ADVANTAGES TO THE END USER

District administrators can assess student success by analyzing a summary of learning plans and focusing on specific areas at the student level. Student learning plan records can be moved to other district schools without the loss of historical information.

New learning plans are created each year and team members can contribute any time without waiting for others' input. Parents and students can view and contribute to learning plans as they are being developed.

fcLearnerPlan Statistics Module

This powerful data analysis module of fcLearnerPlan gives administrators the capability to gather a variety of useful reporting results based on a selected pool of learning plans. Reports can be as simple as determining how many plans are in the system, to viewing the number that contain a specific type of long-term goal.

SECURITY

Security protocols ensure protection of privacy. Information is stored on a central server with appropriate security and backups where data entry, storage and access are independent of the workstation or software on a specific Windows or Mac computer using the FirstClass client.

OTHER COMPATIBLE SOLUTIONS

fcSchool®:

Student information management of student profiles, registrations, fees, class enrollments, schedules, reporting, communication, grades, transcripts, and forms

fcConnect™:

Outcome based student assessment, district report cards, gradebooks, progress reports, standardized test tracking, attendance and communication management

fcBookTracker™ and fcAssetTracker™:

Track organization resources to staff and students

fcTimesheet™:

Employee activity management and time tracking

Bramm Technologies Inc. is a Canadian based software development and consulting company that has been incorporated since 2003.

Our commercial solutions are designed to consolidate our clients' data management processes to FirstClass®: a communication and collaboration platform widely used by school districts and corporations world-wide. Leveraging FirstClass, the access and management of organizational data can be achieved from virtually any location having an internet connection, in a secure manner.
